

Personal Reflection

Working on this project was a very interesting experience, as it felt like the closest thing we've had to a real-world job project so far. It required us to collaborate, manage our time effectively, and tackle unexpected challenges—all essential skills in a professional environment. I found it fascinating to see how every component of the website came together to create a cohesive product, which gave me a better understanding of the intricacies involved in web development.

That being said, the process was also quite stressful at times. There were moments when errors appeared, and I had no idea how to fix them. Debugging was particularly challenging, especially when issues arose in areas I wasn't as familiar with. These situations were frustrating, but they pushed me to step out of my comfort zone and be more open to asking for help from others. This was a significant learning experience for me, as I realized that collaboration and seeking advice are vital components of problem-solving in any team setting.

Throughout the project, I primarily focused on the design aspects, such as the aesthetics and layout of the webpage. I enjoyed ensuring that everything looked cohesive and visually appealing, while my teammate, Hannah, handled most of the technical and functional elements. This division of tasks allowed us to leverage our individual strengths, making our teamwork even more effective. I particularly enjoyed experimenting with color schemes, typography, and layouts to create an engaging user interface that aligned with our vision for the project.

In addition to the design work, I also contributed to brainstorming sessions where we discussed how to implement certain features and improve the user experience. While Hannah took the lead on coding these functionalities, I provided input on how they should integrate seamlessly with the overall design. This collaboration helped me appreciate the balance between form and function in web development.

Overall, this project highlighted areas where I can improve, particularly in understanding technical functionality and troubleshooting. However, it also reinforced the value of teamwork and mutual support. The experience taught me to embrace challenges as opportunities to grow and to rely on my teammate's

expertise when needed. Moving forward, I'm motivated to continue learning and developing both my technical and design skills, and I'm grateful for the experience of working on such a dynamic and challenging project. This journey has not only enhanced my skill set but also deepened my appreciation for the collaborative nature of web development.
